- High-quality specimens (Thiel embalmed)
- Small groups of 2 participants per table
- Best available instruments by KARL STORZ
- Traditional Swiss style social event and dinner
- Full catering throughout the day
- CME credits: 16

2018 Swiss Endoscopic Ear Surgery Course

Bern, Switzerland, August 27th - 28th 2018

Introduction

It is our pleasure to announce for the third time in Switzerland an exclusive endoscopic ear surgery course. The program of this course includes live surgeries, one full day of whole head cadaveric dissection and podium presentations by Swiss and international faculty.

The Department of ENT, Head and Neck Surgery, Inselspital and the Institute of Anatomy of the University of Bern will jointly organize this course. We are proud to announce the participation in live surgery and step-by-step dissection of Prof. Livio Presutti from Modena, Italy.

Format and Objectives

It is the aim of SEES to provide an excellent, realistic, and fruitful learning environment to all participants. Small groups of two participants will be introduced to the different techniques by personal instructors. The course strongly relies on hands-on demonstrations using whole-head cadaveric specimens. Lectures and live demonstrations will cover the theoretical background of the subjects taught. The official language of the course is English.

The following topics will be covered

- Anatomy
- Powered instruments
- Endoscopic access to the middle ear
- Tympano-ossiculoplasty
- Stapes surgery
- Endoscopic cochlear implantation
- Endoscopic access to the lateral skull base
